

Getting Started

Getting started

We're filming a reality TV show about the barbaric humans of planet earth, and we shall prove to the universe that our colonisation is beneficial - nay, *necessary* to make sure the savages do not run rampant, and prove to our citizens our conglomerate is the best option they have.

Welcome on board.

We're not asking.

The show's concept is something you all know very well - Earth culture! The main game follows your most popular game genre - MMORPGs.
Though, no respawns here.

You will get the option to refuse joining the show, though we can't guarantee what will happen to you afterwards!

If you so decide to join us, you will receive a system detailing your basic stats and skills in an easy to understand way.

It's the least we can do as the more advanced species.
Our AI will explain the rest:

Starting State

- **Race:** Human
- **Level:** 1

Your character is built from two structural pillars:

- **Body** — Physical capability. Changes more easily.
- **Core** — Mental and identity-based capability. Harder to change.

Stat Allocation

All Stats are rated **1–5**.

At character creation:

- Allocate **7 points across Body Traits**
- Allocate **7 points across Core Traits**

No Trait may exceed 5 at creation.

Trait Scale (1–5)

This is a reference table for the implications what each trait means:

Rating	Meaning
1	Functionally impaired. You struggle in basic situations.
2	Below average. Noticeable weakness under pressure.
3	Baseline adult human capability.
4	Exceptional. Clearly above the norm.
5	Rare talent. Top percentile without enhancement.

The Four Traits

Physique (Body)

Strength, endurance, durability, applied violence.

Scale Examples

- 1 — Weak grip, low stamina, poor resilience.
- 2 — Untrained adult.
- 3 — Physically capable and healthy.
- 4 — Trained, conditioned, reliable under strain.
- 5 — Elite-level physical conditioning.

Reflexes (Body)

Coordination, reaction speed, precision, spatial control.

Scale Examples

- 1 — Slow reactions, poor balance.
- 2 — Struggles under sudden pressure.
- 3 — Normal reaction timing.
- 4 — Fast hands, controlled movement.
- 5 — Highly precise, near-professional agility.

Mind (Core)

Mental resilience, magical affinity, processing speed, control under stress.

Scale Examples

- 1 — Easily overwhelmed, poor focus.
- 2 — Inconsistent reasoning under pressure.
- 3 — Stable thinking in tense situations.
- 4 — Strategic, composed, disciplined.
- 5 — Highly analytical, difficult to destabilize.

Charm (Core)

Presentation, framing, social weight, perceived dominance.

Scale Examples

- 1 — Poor framing. Expressions misread. Presence diminishes scenes.
- 2 — Inconsistent presence. Confidence appears strained.
- 3 — Neutral presentation. Actions read as intended.
- 4 — Strong presence. Silence carries weight.
- 5 — Cinematic gravity. The scene favors you.

Stats are used to determine which actions you can do, what their price might be. Refer to [Stats](#).

Skills & Skill Points

At character creation:

- Each Trait grants **Skill Points equal to its level**.
- For every point in a Trait, you gain **1 Skill Point tied to that Trait**.

Example:

- Physique 4 → 4 Physique skill points.
- Mind 2 → 2 Mind skill points.

Skills define your mechanical toolkit. Refer to [Skills](#) for further explanation.

Tags

Tags represent how the **Show identifies you**.

They influence:

- Loot bias
- Crowd response
- Narrative framing
- Certain mechanical triggers

Gaining Tags

- Repeated behavior establishes identity.
- Hidden conditions are fulfilled.
- Completing specific Goals or Directives.
- Corporate narrative shaping.

Tag Lifecycle

- Tags can be **Reinforced** through continued behavior.
- Tags can **Fade** if neglected.
- Faded Tags can be lost.
- Lost Tags can later be reacquired.

Further information is detailed under [Exposure - tags](#).

Directives (Corporate Quests)

Directives are issued by **The Corporation or its subsidiaries**.

They:

- Are optional.
- Often involves risk.
- Do not guarantee benefits.

Common Directive Types:

- Eliminate / Protect / Retrieve
- Control narrative
- Escalate or delay conflict
- Generate spectacle
- Become the distraction

Rewards vary. Consequences exist. [Further details](#).

Goals (Crowd Challenges)

Goals are issued by the audience. They reward spectacle, risk, and engagement.

Common Goal Types:

- Finish quickly
- Overkill
- Stylish execution
- Act while exposed

- Subvert expectations
- Play into a Tag

Completing Goals grants rewards and increases crowd favor. [More on this.](#)

Narrative Tokens

Narrative Tokens allow players to interfere with the script.

Gaining Tokens

Earned through:

- Crowd donations
- Corporate rewards
- Rare monster drops

Using Tokens

A Narrative Token allows a significant narrative shift within a scene. Scope is determined by DM discretion.

Hard Limits

You cannot:

- Bring back the dead
- Change how someone feels about you
- Instantly kill someone
- Request more Narrative Tokens

Narrative Tokens alter events.

They do not override core system rules.

The Lounge

The Lounge unlocks after defeating the designated **Tutorial Boss**. It is the party's corporate-controlled base.

Rules

- Cannot enter during combat.
- All Loot Boxes must be opened inside.
- Opening Loot Boxes opens all currently held boxes simultaneously.

- A guide is available.
- Staying too long results in ejection.
- Re-entry is locked for 24 hours after ejection.
- The Lounge is fully monitored.
- Higher Lounge levels increase surveillance.

Resources

Some resources are required in order to upgrade your lounge.

Upgrade Tokens

Primary upgrade currency. Earned from:

- Bosses
- Bartering
- Crowd donations
- Directives
- Rare loot boxes

Boss Tokens

Used to unlock certain modules.

Divided by tier (Bronze / Silver / Gold/ Legendary/ Mythic/ Godly).

Major Sections

- Living Facilities
- Factory
- Modification Center
- Garage
- Universal Travel

Some features require specific unlock conditions beyond cost.

For full Lounge information, refer to [Lounge](#).

Stats

Stats

The stats influence multiple points - The way the character looks, the skills you can raise, the items you can use, and the types of actions you can do.

For every point in a stat, you get a point to invest in a skill of the attributed stat.

Actions

An action works automatically as long as the stat requirement is fulfilled.

A list of common actions:

Action	Primary stat	Secondary stat
Sprint, Chase	Physique	-
Swim	Physique	-
Resist Physical	Physique	-
Climbing, Scaling	Physique	Reflexes
Balance	Reflexes	-
Sneak	Reflexes	-
Shadow	Reflexes	Mind
Leap, Vault	Reflexes	Physique
Command	Charm	-
Persuade	Charm	Mind
Intimidate	Charm	Physique
Track	Mind	-
Navigate	Mind	-
First Aid	Mind	-
Resist mental	Mind	-
Bluff	Mind	Reflexes
Repair, Rig	Mind	Reflexes
Disable Trap	Mind	Reflexes

Stat Caps

Each stat has upgrade points. Each upgrade point gives extra buffs to the character. Upgrade points are unlocked upon reaching 10 in the relevant stat. That means the stat requirement over 10
Example: every 5 points = 15 and on.

Physique

Every 5 points in physique raises the max hp of a body part by 1.

Reflexes

Every 12 points in Reflexes gives 1 physical resistance of a chosen type (Bleed, Crush, Burn)

Mind

Every 15 points in mind gives 1 psychic resistance.

Charm

Every 20 points in charm gives you Camera Call stacks. Camera Call allows you to cause the show's camera to focus on a specific target. Each stack allows one use per session. When the camera is focused, Viewership, Followers, and Patrons gained or lost from the called upon target are doubled until the end of that target's current or next action."

Skills

Skills

Skills are the main way of executing actions within the world.

All skills are attributed to one or more stat, and are raised with stat points from said stat.

Skills have levels, starting at 0, at which point they are revealed, but hold no effect. This is to allow players to know this skill is possible, without forcing them to invest in it.

Each level improves reliability, duration, scope, or control of the skill, as defined in the skill description.

Thresholds

Skills have thresholds every level after 5, including. Reaching a threshold upgrades the effect of the skill.

- Upgrading a skill — Adding more effects on the skill
- Mutating a skill — Changing its purpose completely

Every skill starts with a cap of 5. This cap can be raised by spending Patron Tokens, unlocking a new threshold band and increasing the skill's maximum level by 1, up to 10.

Each new cap raises the ceiling of what a skill can become. A skill at cap 5 is useful. A skill at cap 6 is build defining. At level 10, it's a game changer.

Skill cap is raised via Patron Tokens, As explained in Directives and Goals.

Acquiring Skills

Most skills are unlocked by doing. Performing specific actions, surviving specific conditions, or fulfilling the skill's listed obtaining requirement will reveal it at level 0.

Some skills — particularly magic — cannot be unlocked through behavior alone. These require an external source:

- Loot Boxes of appropriate tier
- Achievements tied to relevant actions
- Lounge modules such as the Wizard's Tower

Example: Setting a target on fire from a distance — via a Molotov, for instance — may award Fireball as an Achievement reward, reflecting the body's first contact with elemental instinct.

Consuming Skills

Some skills will combine or consume other skills as a method of upgrading and mutating playstyles.

Consumed skills permanently alter the upgraded skill and cannot be recovered unless explicitly stated.

Skills will never do so by themselves, and require specific conditions and consent from the user in order to do so.

Example

Drill (5/6)

Physique, Reflexes

Requirements: Spear, 20 Physique, 15 Reflexes, Spear Tactic 3, Tag: Reckless.

Moment Cost: 2

Effect: Deal 3 Bleed in a line (Can be curved at level 6), up to 3 spaces away. Move 2 spaces max per moment. Stop upon reaching the amount of spaces wanted.

Description: Leap forwards in a spinning motion, tearing through enemies like a bullet.

The skill will only be upgradeable by using skill points from both stats.

Health

Health, Damage & Conditions

Characters suffer **structural damage** and **escalating conditions** that lead to collapse or death if not addressed.

Body Parts & HP

Characters are divided into body parts. Each part has a small amount of HP representing how much pressure it can absorb before failing.

Body Parts

Body part	HP	Lethal
Head	2	Yes
Torso	5	Yes
Arm (each)	2	No
Leg (each)	3	No

HP represents structural integrity, meaning when a body part reaches 0 HP, it fails.

Death

A character dies immediately when either of the following occurs:

- Head HP reaches 0
- Torso HP reaches 0

Limb damage alone cannot cause death directly.

Bleed out

If death occurs in the following states while the torso or head still have hp, the character enters a 1 Clock (Defined in [Combat](#)) worth of bleed out period:

- Bleeding
- Crushed
- Poisoned
- Infected
- Exhausted

Delaying the cause of death allows the player to stay alive. Healing the death condition would also return the player to commission according to the type of healing used.

While bleeding out, the player is:

1. Helpless
2. Cannot Act
3. Any damage instantly kills them.

Disabled Body Parts

When a non-lethal body part reaches 0 HP, it becomes **disabled**.

Arm Disabled

- Items held in that arm are dropped
- Two-handed actions are impossible
- Using the arm causes a **Forced Action** with severe consequences

Leg Disabled

- Movement becomes a Forced Action
- Target becomes **Exposed**
- Sprinting or evasive movement is extremely dangerous

Further Damage to Disabled Parts

- Further damage to a disabled part does **not** reduce HP
- Instead, it escalates conditions or may result in **permanent loss**
- Severe or deliberate damage may detach the limb and applies Bleeding

Targeting Restrictions

Head

- Cannot be targeted by default
- May only be targeted if the target is:
 - Exposed
 - Helpless
 - Overwhelmed (ambush, execution, extreme speed disparity)

Torso, Arms, Legs

- Always targetable unless the fiction prevents it

Damage Resolution

When an attack hits:

1. Choose a valid body part
2. Reduce HP on that part (usually 1)
3. Apply the damage type's effects

Damage types determine **how failure escalates**, not just HP loss.

Damage Types

Bleeding

- Reduces HP **on hit**
- Applies Bleeding condition
- Untreated bleeding can open potential to poison and infection.
- Every Clock advances in severity.
- Tier 1: open wound
- Tier 2: Forced action - Body and Shock tier 1
- Tier 3:
 - Part completely dies off - lethal on torso or head
 - all actions are Forced action - Body
- Tier 4: Death

Crushed

- Reduces HP on hit
- Tier 1: Break - Causes Forced Action - Body
- Tier 2: Shatter - Forced action - Body
- On limbs: disables the part
- On torso: causes internal trauma and rapid escalation
- On head: instantly lethal if targetable

Suffocation

- Torso only
- Ignores limb HP
- Begins a **2 Clock death timer**.
- When the timer completes, the character dies

Chilled

- Applies to a specific body part
- Does not deal HP damage
- Tier 1: Resolves after 8 Moments without further advancement
- Tier 2: Forced Action - Body
- Tier 3:
 - The part becomes disabled

- On the head, this is usually fatal or incapacitating

Exhausted

- Affects the entire body
- Increases action Moment cost
- Exposure occurs on body hits as well.

Infected

- Affects the entire body
- Prevents healing
- Accelerates other conditions
- Might have special effects
- Becomes lethal if untreated

Burn

- Applies to specific body part
- Applies HP damage
- Tier 1:
 - stops bleeding
 - removes chill.
- Tier 2:
 - stops poison
 - clears infection
 - Forced Action - Body
- Tier 3:
 - Loss of part of limb
 - Debuff - Shock - tier 3

Poison

- Does **not** deal HP damage immediately
- Requires an entry condition:
 - Open wound
 - Orifice (lungs, mouth, eyes)
 - Injection or bite
 - Helpless target

Poison Activation

- Each poison has an activation delay (Usually 2 Clocks)
- Upon activation, poison applies effects and/or HP damage
- Poisons always target **specific body parts**

Poisons are defined by **Type** and **Tier**.

Poison Tiers

Tier 1 — Disruptive

- Debilitating effects
- No lethal clock
- Can be fought through

Tier 2 — Crippling

- Disables parts
- Introduces clocks
- Requires adaptation

Tier 3 — Catastrophic

- Introduces a lethal clock most of the time.
- Cannot be ignored or waited out

Tier 3 poisons must be actively delayed or cured or the target will die.

Poison Types

- Neurotoxin
- Hemotoxin
- Myotoxin
- Pneumotoxin
- Cytotoxin

Poison Use

Each poison specifies:

- Target (1 or more body parts)
- Activation delay
- Effects or HP damage
- Tier

Poison Spread

- When a poison advances, it spreads to an adjacent body part at reduced intensity
- The spread poison shares advancement clock
- Arm or Leg → Torso
- Torso → Head or Limbs

Poison Soup

If multiple incompatible poisons affect the same body part:

- All poison effects immediately end

- The target takes direct HP damage equal to combined severity, meaning combination of all tiers.
- The toxicity dissipates completely

This is violent, uncontrolled, and unpredictable.

Condition Advancement

Conditions may stack freely, and multiple lethal timers may resolve simultaneously

Delaying & Treating Conditions

Conditions have three states:

- **Active**
- **Delayed**
- **Resolved**

Delay

- Most in-combat treatments delay conditions
- Delayed conditions do not advance
- Delay ends when the condition would advance again

Examples:

- Bandages delay Bleeding
- Antitoxins delay Poison
- Clean air delays Suffocation

Resolution

- Full resolution usually requires downtime, advanced tools, or special abilities
- HP recovery during combat is extremely rare and explicitly stated

Shock

Shock applies at different times for different reasons, and is the result of pain.

These are the effects by tier:

Tier 1: Shout -

- Cry out uncontrollably
- Draws attention
- Breaks stealth, alerts enemies

Tier 2: Stutter -

- You freeze or seize up
- The current action fails

Tier 3: Faint -

- You collapse
- Lose consciousness for 1 Clock
- Drop held item

Tier 4: Helpless - You become Exposed for the rest of combat

Shock works at the tier specified, unless elevation is stated, in which case the player takes the latest shock and applies one higher level.

Environmental Hazards

Environmental hazards apply **conditions directly** instead of dealing damage unless stated otherwise.

Examples:

- Smoke → Suffocation
- Blizzard → Chilled
- Filth → Infection
- Acid fog → Poison

Dissolution

Dissolution is a condition targeting the Mind.

It functions identically to Suffocation, but applies to mental integrity rather than the body.

- Begins a 2-Clock death timer on the Mind.
- When the timer completes, the character's Mind collapses. They are KO'd.
- Each Clock spent in the triggering condition advances the timer by 1.
- Removing the cause pauses the timer. It does not reset it.

Dissolution cannot be applied by standard attacks or enemies. It requires a specific source — environmental, creature-based, or otherwise explicitly stated.

A character afflicted with Dissolution dies, but is not necessarily gone from the story, as dissolution can have various effects on it, such as brainwashing, mind-crushing, zombification and more.

Resistances

Resistances are flat reductions to damage of their type. This could be a specific type, like bleed, or a generic type, like physical. This means 2 bleed resist lowers bleed damage by 2 directly, up to a cap of 0.

Affliction resistance and psychic resistance work by tiers. Each tier gives immunity to all in its tier and below.

Resistance classifications are as followed:

Physical resistance - Bleed, Crush, Burn.

Affliction resistance - Chill, Poison, Infection.

Psychic resistance - Dissolution.

Combat

Combat

Clocks

Combat unfolds along a shared **Clock**

- The **Clocks** are made out of **Moments** (typically 10).
- These Moments count downwards.
- When the clock reaches 0, it resets to the starting value and starts anew.
- Actions take time, measured in Moments.
- Multiple characters may act at the same Moment.

Time is shared. Actions do not interrupt each other — they overlap.

Initiative

- Unless surprised or ambushed, the **player party chooses which side acts first** when combat begins.
- The chosen side may immediately act on the starting Moment.
- Initiative only determines who begins acting; there is no fixed order.

Ambush & Surprise

- If one side ambushes the other, the ambushing side enters combat at the normal starting Moment.
- The surprised side enters combat at a **later Moment**, determined by the severity of the ambush.
 - Minor surprise: start at Moment 8
 - Full ambush: start at Moment 5
- A surprised character may not act until their entry Moment is reached.

Acting in Moments

- When a character reaches their current Moment, they may declare an action.
- Each action has a **Moment Cost**.
- After declaring an action, the character's next action is scheduled at:
Current Moment – Action's Moment Cost = Next Moment of action.

If multiple characters act at the same Moment, resolve actions in any order that best fits the fiction.

Action Moment Costs (Baseline)

Move	1 for every 4 spaces (1-3 spaces cost 0)
Weapon attack	1-3 (Weapon Dependant)
Use a Skill	1 - 3 (Skill Dependent)
Inventory Interaction	0 for the first time, 1 for every interaction after in succession. Resets upon using a different action with a cost of 1 moment at least.

In case of multiple actions:

1. Determine their order
2. Tally their costs

Multi-Shot Actions & Exposed

Any action with a **Moment Cost greater than 1** represents a sustained or committed effort.

- While performing a multi-Moment action, the character is **Exposed** for the duration, unless protected by any method.
- The character may not take other actions until the action resolves.
- If the character is forced to move, loses control, or the fiction invalidates the action before its resolution Moment, the action collapses into a **Forced Action – Tool**.

Multi-Moment actions always resolve before Forced Action consequences are applied.

Forced Actions

A **Forced Action** is any action taken while conditions make it unsafe, impaired, or dangerous.

Forced Actions are always allowed.

Resolution Timing:

- The action resolves normally.
- Forced Action consequences are applied **immediately after resolution**, or on the following Moment if timing requires.

Possible Consequences:

There are 2 types of forced actions: Body and Tool.

Roll a D6 and take the result according to the source of forced action

Potential Body consequences:

1. Tear Something - You take 1 damage to the relevant body part. If at 0 HP, the condition escalates.

2. Lock-Up - The body part is unusable for the next 3 Moments.
3. Condition Surge - Advance one active condition by 1 clock. Prioritizes conditions responsible for the forced action. If no active condition exists, apply Shock Tier 1 instead.
4. Drop the item held in the limb involved in the action. If no specific limb is responsible, choose one hand to drop its item.
5. Shock Spike - Increase Shock by 1 tier.
6. Stumble - You become exposed until your next moment.

Potential Tool consequences:

1. Whiff - The action fails to meaningfully impact its intended target.
2. Overcommit - You become exposed.
3. Collateral - Ally, object or environment affected.
4. Slip - You are unarmed until your next moment.
5. Strained grip - +1 Moment cost on your next action with the tool.
6. Overextension - Your next scheduled action is delayed by 1 additional Moment.

Exposed

Exposed is a lethal state. It allows for the following actions.

- Characters may have their **Head targeted**.
- Characters may suffer other lethal targeting if such exists.

A character becomes Exposed when they are:

- Stumbled
- Proned
- Helpless
- Channeling
- Affected by an exposing ability

Enemies on the Timeline

Enemies act individually based on their position on the Clock.

- Each enemy has its own current Moment and schedules actions like any other combatant.
- The GM may introduce new enemies, remove defeated ones, or shift enemy behavior at clear narrative beats, such as boss phases or Clock resets.

Enemy behavior should reflect pressure, opportunism, and momentum on the timeline rather than fixed formations.

Attack resolution

In order to resolve an attack, skill or any other sort of ability, the requirements of said action must be fulfilled.

If requirements are fulfilled, the action automatically succeeds and activates its effects.

The requirements are directly tied to the weapon or skill used, and changes between them.

If weapon or skill requirements are not fulfilled, The action is usable, but the user must roll Forced Action - Unexpected Circumstances.

Weapon requirements vary greatly, and can require specific moves, positions, tags, tropes and moments in order to work.

Reloading a weapon always takes 2 hands, and reloading is mandatory unless the weapon has auto-reload

For ranged weapons, Moment Cost is measured by RPM, Standing for Rounds Per Moment, meaning a 3 RPM weapon would shoot 3 rounds for every moment spent.

Example:

Spark-volver
Requirements:

- 1 Hand
- 5 Physique
- Equipment: Sunglasses
- Tag: Flashy
- Tag: Catchphrase

Range: 10 RPM: 3 Damage: 2 Burn, 1 Crush

Extra Effects: Guided - Ignores cover.

Description:

Add a bit of a fourth of July spirit with this Hazard grade, American-inspired, redneck-proof fireworks revolver! Give PTSD to veterans, show them your nationality and look cool while doing it!

Disclaimer: The Corporation™ claims no responsibility over mishandling, accidents, implosions, misfires or any other harm the user may encounter through the use of this weapon

List of basic weapon types and their details:

Light Small Weapons -

- Daggers, Shortswords, Knives, Tools
- Requirement: 1 Physique, 1 Hand
- Range: 1 space, single target
- Base Moment Cost: 1
- Basic Damage: 2 Bleed

Light Large Weapons -

- Rapiers, Whips, Spears, Light Polearms
- Requirements: 3 Physique, 1 Adjacent empty radius, 2 Hands
- Range: 2 space, Line
- Base Moment Cost: 1

- Basic Damage: 2 Bleed

Heavy Small Weapons -

- Maces, Hammers, Axes, Clubs
- Requirements: 2 Physique, 1 Hand
- Range: 1 Space, Single target.
- Base Moment Cost: 1
- Basic Damage: 2 Bleed / Crush (Weapon Dependent)

Heavy Large Weapons -

- Greatswords, Mauls, Halberds, large polearms
- Requirements: 5 Physique, 1 Adjacent empty radius, 2 Hands
- Range: 2 Space, Line / Arc
- Base Moment Cost: 1 / 2 (Weapon and Action dependant)
- Basic Damage: 3 Bleed / Crush (Weapon Dependent)

Light Ranged Weapons -

- Pistols, hand crossbows, slings, bows
- Requirements: 2 Reflexes, 1 / 2 Hands (Weapon Dependent), Steady ground, Ammunition, Reloading
- Range: 5+ (Weapon Dependent), Single Target
- Base Moment Cost: 1RPM
- Basic Damage: 1 Bleed

Heavy Ranged Weapons -

- Rifles, shotguns, cannons, large bows, heavy crossbows
- Requirements: 4 Reflexes, 2 Hands, Steady ground, Ammunition, Reloading
- Range: 5+ Line / Cone / Area / Dome / Single target (Weapon Dependent)
- Base Moment Cost: Varies greatly.
- Basic Damage: 4 Bleed/Crushed

Enemies

Enemies

Enemies win by creating problems faster than the player party can manage them.

Enemy Categories

All enemies fall into one of four categories:

- **Mobs**
- **Elites**
- **Bosses**
- **Super Bosses**

Each category fulfills a distinct combat role.

According to Marketing:

Mobs

The weaklings, scrubs, punching bags, call them as you will.

Think of the casual Goblin or Slime.

They are weak. They will die in a single meaningful blow. They are never alone.

Elites

They mobs' big brothers and sisters. These badasses will take more than just a simple smack to take down. They will do their best to make sure your screentime is cut as short as possible.

Bosses

The main spectacle. The great culler of our show, and your best bet at making your crowd roar in joy. They might be stronger than you, faster than you, smarter than you, or even just have a bigger stick to hit with. Whatever it may be, they are never quite as simple as they look.

Most bosses have win conditions that are less about giving them a hit on the head, but rather reaching the position where such a hit is even possible.

They come in a few variants:

- **Neighbourhood** - Just as it sounds, we took your neighbourhood, made it into a zone and placed a boss in it. This is as easy as they get.
- **District** - The amalgamation of neighbourhoods, these guys went up the corporate ladder, and by that we mean they killed plenty in the past. They are no joke.
- **City** - A grand connection of districts, made into flesh and blood, metaphorically of course, we promise no real connection between them and any real capacity of death.

Super Bosses

The biggest, Baddest of boys. They are the next 3 levels of bosses:

- Precinct - Whatever you're imagining, make it bigger, Angrier, and probably a little more intelligent. Good folks, really, if you can get past the whole trying-to-kill-you part.
- Country - Far and few between, if you meet one of these, congratulations, you won the anti-lottery.
- Stage - Yup. The boss of the entire stage. Don't worry, we don't expect you to beat this one. Not without an advanced Laser Atomization Unit at least.

Enemy Reorganization

Enemies may reorganize at clear narrative beats:

- End of a round
- Loss of leadership
- Phase changes
- Significant condition shifts

Reorganization may include:

- Splitting or merging groups
- Changing tactics
- Altering formations

Enemies never reorganize mid-action.

Nukes & Enemies

The show assumes players can create catastrophic outcomes.

Enemies, especially bosses, may respond to extreme effects by:

- Triggering phase changes
- Accelerating pressure
- Repositioning automatically
- Sacrificing resources to survive

Lounge

Lounge

The Lounge is the main base of the players as they explore the dungeon.

It is meant to function as their modular base of operations.

It is only unlocked upon finishing the tutorial boss, as a method of making sure money doesn't go to waste.

The Lounge is monitored fully, and every upgrade increases surveillance levels, meaning whatever the players say or do in it is visible for all in a 24/7 camera feed.

The Lounge is built of 5 Major Parts:

1. Living Facilities - These are the facilities meant to host the players, give them rest, allow them to clean themselves and allow them their living conditions.

Submodules:

- Dormitories - Unlocked automatically. Has a bed and a small mirror. Can be upgraded with bed and furniture to require less sleep or gain extra functions.
- Restrooms - Unlocked automatically. Has toilets. Can be upgraded with a shower, medicine cabinet and furniture to help with hygiene and medicine storage.
- Kitchen - To Unlock: 1 Bronze Boss Token. Can hold Oven, Stove, Microwaves, Air fryer, fridge and other cooking appliances. Can be upgraded for automation or ease of use.
- Farm - To Unlock: 1 Silver Boss Token. Can be used to grow animals, harvest food easily and raise mounts.

2. Factory - The factory is the crafting area where the players can modify or create new equipment.

Submodules:

- Forging Station: To Unlock: 1 Bronze Boss Token. Holds a Blacksmith's Workshop, Carpenter's Workshop And Fletcher's Workshop and Bower's Workshop.
- Goldsmith: To Unlock: 2 Bronze Boss Tokens. Allows the creation and modification of Jewelry and Trinkets.
- Melding Station: To Unlock: 1 Silver Boss Token. Allows the merging of 2 pieces of equipment into 1 as long as they are the same type.
- Advanced Fabricator: To Unlock: 1 Silver Boss Token. Allows the use of advanced technology in weapon creation. This includes, but not limited to Gunpowder and Electricity
- Enchantment Altar: To Unlock: 2 Bronze Boss Tokens. Allows the extraction and application of modifiers for weapons.
- Wizard's Tower: To Unlock: 3 Bronze Boss Tokens. Allows the creation of modifiers and magical relics.'

3. Modification Center - The Modification Center is the area where the characters can change their basic fundamentals, like race and skills.

Submodules:

- Skill Gemstone: To Unlock: 1 Bronze Boss Token. Allows disassembling, consuming or merging skills.

- Tattoo Artist: To Unlock: 1 Gold Boss Token. Allows inscribing permanent buffing tattoos.
 - Surgeon's Table: To Unlock: 2 Silver Boss Tokens, undergo race change. Allows the modification of the body biologically.
 - Augmentation Hub: To Unlock: 2 Silver Boss Tokens, undergo race change. Allows the modification of the body mechanically.
4. Garage - The area in charge of mechanical mounts.
Submodules:
- Bike Shop: To Unlock: 3 Silver Boss Tokens. Allows the creation of bikes, bicycles and other small vehicles.
 - Car Shop: To Unlock: 3 Silver Boss Tokens. Allows the creation of medium rides.
 - Armory: To Unlock: 3 Gold Boss Tokens. Allows the creation and modification of Armored Vehicles.
5. Universal Travel - The spot where the door of descent lies. Nothing can take this spot, and there are no submodules available for it.

Exposure

Exposure

Exposure symbolizes the public identity of the player. That means:

1. How many are watching the player?
2. What kind of people are watching the player
3. How the audience views the player.
4. What they wish the player would show them.

The following categories control these aspects:

Viewers

Viewers are the number of people actively watching the players currently.

The amount of viewers directly correlates to the reward potential and the chaotic nature of the session.

Viewers are opportunities. They are people who could evolve to Followers, and Followers keep the camera on you.

Followers

Followers are the number of people who clicked “Follow” on them. This informs the audience when the player is active, making them recurring members of the player’s audience. They affect the rating of the player on tv, the potential allies or enemies they can get, and the amount of directives the players may encounter.

Patrons

Paying members of the audience, which invest money in the players. They can set Goals for a sum of money, which allows for direct interventions in the story, and the dishing out of rewards for a challenge.

When a player earns a new Patron — by completing a Goal that converts a viewer into a paying supporter — they receive a Patron Token. Completing a Directive also awards a Patron Token.

Patron Tokens represent belief. The kind that costs something.

They are spent to raise a skill's cap beyond 5, increasing its maximum level by 1 per token, up to a ceiling of 10. Each raised cap unlocks a new threshold — a qualitative leap in what the skill can do. Refer to Skills for full details.

For players who struggle to earn Patrons, Boss Tokens can be exchanged at a rate of 3 Boss Tokens per 1 Patron Token. This exchange is one-way only.

Tags

Players can obtain Tags, which unlock skills, equipment, and a variety of other styles. Some tags or tropes are unique to one player only, while some can be shared.

Tags are a way to categorize how the players are seen by the audience, how their presence affects the screen, and sometimes, their roles in the story.

The player gains a Tag via one of these conditions:

1. The table agrees that “X is their thing, it's just the way it is.”
2. They fulfill the conditions of the Tag, kept hidden until earned
3. They fulfill a Goal or Directive which gives a Tag

Adding Tags

Players can ask for tags to be added, with the condition of them appearing on [TVTropes.org](https://www.tvtropes.org) and a bit of brainstorming as to their conditions and effects.

Tag Behavior

Tags can be acquired, reinforced and faded.

Reinforcing a tag means playing into it even harder, stacking gear and skills relating to it, and potentially making it a permanent mark for yourself.

Faded tags are tags that the player obtained, but does not play to anymore. These tags are eventually lost, but can be reacquired upon fulfilling their conditions again.

Current List of tags

The following list is every tag out there, with a small description meant to guide the player to obtain it.

- Documentary — Everyday life turned cinema. Narrate or frame a mundane action as if it were meaningful. The crowd agrees.
- Playa — Flirting with danger. Voluntarily put yourself at risk for no tactical reason, and walk away from it.
- Absolute Cinema — Top 10 cinematic moments right here. Do something that makes the whole table go quiet for a second.
- Edgy — Careful, don't cut yourself! We don't have bandaids around here. Commit a genuinely dark act and show no visible reaction to it.
- Anime — Not another filler episode! Do something that would require a three-episode flashback arc to explain. In the moment.
- LEEROY JENKINS — Plan? I don't need a plan! Charge into a situation solo with no preparation and force everyone else to react.
- Scrub — Ouch, what a fumble! Gonna remember that one for a while. Roll a Forced Action consequence that makes things significantly worse for yourself.
- Stinker — Shower, friend. Heard of it? No? We can tell. Be the source of a condition, smell, or substance that affects allies as much as enemies.
- Pinky Promise — This will totally backfire on us, right? Make a commitment out loud — to an ally, an enemy, or the camera — and then watch it immediately complicate things.

- Unkillable — Conquer the castle, and when it collapses upon you, stand on its ruins. Survive three separate instances that should have killed you, across any number of sessions.
- Oops — You didn't need that eye, right? Cause permanent or serious collateral damage to an ally, an innocent, or yourself by accident.
- Vengeful — Eye for an eye. Take a significant action specifically to repay harm done to you or someone you care about.
- Menace — Don't make eye contact with this guy. Cause an enemy to retreat, surrender, or hesitate purely based on your presence or reputation.
- Animal Planet — I love pets! I have a dog, a cat, a lizard, a bird... Establish a non-hostile relationship with a creature that has no reason to tolerate you.
- Fan Favorite — Take a bow, little actor! Receive an unsolicited positive crowd reaction three times. They're not rooting for the party. They're rooting for you.
- Corporate Asset — Orders are absolute. Complete a Directive without deviation, complaint, or asking what it's for.
- Tragic — Suffering brings creativity. Lose something — a person, a part, a capability — and keep going without resolving it.
- Bolivian Army Ending — You never stood a chance. Enter a fight dramatically outnumbered or outclassed and make them work for it.
- Chunky Salsa Rule — Pop goes the goblin! Kill something in a way that requires cleanup.
- Coconut Superpowers — No way you survived that! Take damage or a condition that should have ended you, and walk it off with no explanation.
- Protagonist — Spotlight, here we come! Be the one who makes the call that changes the direction of the session. The crowd noticed.
- Antagonist — I too, can write myself a story. Deliberately position yourself against the interests of an ally, an NPC, or the Corporation — and frame it well.
- Anti-Hero — The right thing for the wrong reasons. Do something genuinely good in the worst way possible, for reasons you won't fully explain.
- Incurable — STOP FLIRTING WITH THE DRAGON! Attempt something socially inappropriate with a target that has every reason to destroy you.
- No Cure For Evil — No rest for the wicked, especially for you. Be the instigating cause of a problem the party then has to solve. Twice.
- Munchkin — Bug or feature? Find an interaction between two mechanics, items, or skills that was not clearly intended. Use it.
- Little Dead Rising Hood — Tiny little devil, clad in red. Be the smallest or least physically threatening member of the party and deal the most damage in a session.
- Mascot — So cute, so memorable. Be referenced, imitated, or protected by an NPC who has no mechanical reason to care about you.
- Butcher — Yum, steak! Reduce an enemy to component parts. Deliberately.
- Survivor — These tracks are fresh. Be the last one standing in a situation where the rest of the party is down or gone.
- Spy — He could be you, he could be me! Operate without anyone — ally or enemy — knowing your real objective for an entire session.
- Liability — Work on yourself, will ya? Be directly responsible for a party wipe, near-wipe, or significant loss. Own it.
- Method Actor — I did my own stunts. I also wrote the script. I'm also bleeding. Stay in a bit, a character, or a stated role through a Forced Action consequence or Shock tier.
- Understudy — I've been watching. I've been waiting. Successfully replicate another character's skill, move, or approach in the moment it was needed.

- Typecast — Oh, we know exactly what you're going to do. Use the same tactic to solve three different problems in three different sessions. It keeps working.
- Prima Donna — This dungeon is not up to my standards. Complain about conditions, resources, or treatment while doing something genuinely impressive.
- Scene Stealer — Sorry, were you in the middle of something? Redirect the crowd's attention from another party member's moment to yours.
- The Monologue — You know, I never wanted it to come to this. Deliver a speech — to an enemy, the camera, or nobody — before, during, or after a kill.
- Fourth Wall — Hey. You watching? Good. Address the audience directly, in-character, in a moment that lands.
- Box Office Bomb — Coming this summer. It did not perform well. Build up to something publicly — announce it, commit to it — and fail in front of everyone.
- Director's Cut — Let's try that one again. Redo a failed action in the same scene and succeed. The crowd saw both versions.
- Certified Fresh — Critics loved it. The party did not. Do something the rest of the party called stupid. The crowd rewarded it anyway.
- SAG Dispute — I'm not doing that. Put it in writing. Refuse a Directive on stated principle, explain why to the camera, and survive the consequences.
- Direct to DVD — It went somewhere. Just not the main screen. Be visibly passed over — for a reward, a moment, a spotlight — and have the crowd notice.
- Callback — Remember this? The crowd does. Return to a previous failure and succeed at it. The context must still be recognizable.
- Nepotism Hire — Somehow still here. Nobody's sure why. Benefit from a reward, opportunity, or survival you clearly didn't earn. Don't acknowledge it.
- One Star Review — Needs improvement in several key areas. Receive direct, public criticism from an NPC, ally, or crowd reaction. Keep performing.
- Student Film — The ambition is there. The budget is not. Attempt something that visibly exceeds your current capability. The effort is undeniable.
- Craft Services — Is there food here? I'm asking for me. Prioritize personal resource management over the objective in a way the crowd finds deeply relatable.
- Resting Loser Face — He looks like he already knows how this ends. Have an NPC or crowd react to your neutral expression as if you've already given up. You haven't. Probably.
-
- Applause Machine — They're clapping. You're not sure why. Neither are they. Generate a positive crowd reaction from a passive action — something you did without trying to perform.
- Unlikely Menace — That should not have worked. Win a confrontation against something significantly more dangerous than you using only what you had.
- Adorable Threat — Aww. Oh no. Deal meaningful damage or cause genuine harm immediately after a moment the crowd found charming.
- Waddled Into Frame — Late. Uninvited. Immediately relevant. Arrive after the situation has already developed and become the deciding factor anyway.
- The Bit — They have a thing. You know the thing. Do the thing. Perform the same signature move or behavior three times across different sessions. The crowd names it.
- Bark Bark Bark — We understood completely. We don't know how. Communicate something critical through non-standard or non-verbal means, successfully.
- Sea World Reject — That was precise. That was practiced. What are you? Execute something trained, deliberate, and technically impressive in a way that recontextualizes your nature.

- Flipper Mode — No hands. No problem. No further questions. Complete a task that explicitly requires manipulation, grip, or hands — without them.
 - Crowd's Baby — If they die we're cancelling the show and we mean it. Reach a point where the audience reaction to your danger is loud enough that the Corporation has to acknowledge it.
 - Nine Lives — One down. Eight to go. Allegedly. Escape a lethal situation through movement, positioning, or luck rather than durability. Do it again.
 - Knock It Off The Table — Was that important? Asking after. Destroy, displace, or ruin something with no stated intent — and have it matter to the scene.
 - Feral Consultant — They asked for input. This is the input. Solve a problem in a way that nobody proposed and nobody can fully explain after the fact.
 - Witnessed — I was there. I watched. I made my choice. Observe a significant event without intervening. The crowd respects this. Or resents it. Either works.
 - Murder Mittens — Small. Armed. Not in the way you expected. Deal significant damage to a target at least two size or threat categories above you using only your natural capabilities.
 - Dead Drop — You left something. It came back. Leave an item, a mark, or information somewhere with no explanation. Have it become relevant at least one session later.
 - Vet Visit — It's been handled. The patient has opinions about this. Be physically managed, restrained, or treated by an ally without your cooperation — and return to function immediately.
 - Territory Marked — You've been here. Whatever was here before knows it. Return to a location and have it reflect your previous presence — through environment, NPC memory, or enemy behavior.
 - 3am Energy — Why. Why now. Why like this. Initiate something — combat, a social situation, a plan — at the worst possible moment with the least possible justification.
 - Indoor Cat — In its natural habitat. Everything is fine. Run. Operate in a situation perfectly suited to your capabilities and demonstrate it completely.
 - Birdwatcher — Patient. Focused. Then not. Track or observe a target across at least two Clocks without acting — then resolve it in a single moment.
-
- Main Vocalist — One of them took the mic. The rest stepped back. Have one dominant personality or mode take over a scene completely — and land it.
 - Visual — Didn't do much. Looked incredible doing it. Generate a crowd reaction from appearance, positioning, or presence alone, with no mechanical action taken.
 - Maknae — Youngest energy. Worst timing. Best outcome. Have your most reckless or naive behavior produce the best result of the session.
 - Rap Line — Informational. Rhythmic. Somehow threatening. Deliver a rapid sequence of tactical or factual information in a way the crowd receives as a performance.
 - Formation — One, two, three, four — we do this together. Coordinate a simultaneous or sequential action with at least two allies that looks deliberate to the audience.
 - Comeback Stage — We thought you were done. You were not done. Return to active contribution after being downed, disabled, or written off — and immediately do something significant.
 - Internal Dispute — They are not in agreement. This is everyone's problem now. Have two competing impulses, objectives, or behaviors visibly conflict mid-action. The crowd picks a side.
 - Solo Debut — No backup. No committee. Just one. Complete an objective entirely independently, with no ally involvement, in a way that reads as intentional.

- Parasocial — They don't know you. They feel like they do. This is becoming a situation. Have an NPC develop an attachment to a specific mode or personality that creates a complication.
- All-Kill — Every chart. Every metric. Simultaneously. Briefly. In a single Clock, generate a Viewer spike, complete a Goal, and deal meaningful damage. All three.
- Disbandment Arc — Something is fracturing. The audience can see it. Reach a moment where internal conflict visibly undermines function — and have the crowd treat it as a storyline.
- Fan Service — This one's for the viewers at home. Do something with no tactical value, purely for audience response. Receive audience response.
- Blue Screen — ... Fail to act on your declared moment with no external cause. Just stop. Then continue.
- Legacy Code — This was the right call, once. Default to a previously successful behavior in a context where it clearly no longer applies.
- Corrupted File — It's close. It's recognizable. It's wrong. Attempt a known action and produce a result that is identifiably off in a consistent, specific way.
- Unpatched — We know about this one. We haven't fixed it. Have a known behavioral flaw exploited by an enemy or NPC. Be aware of it happening. Be unable to stop it.
- 404 — Request received. No data returned. Be asked for something — information, a skill, a response — and have nothing. No fallback. Just absence.
- Out of Memory — We've done this before. Apparently not. Repeat a previous action with full commitment and zero recognition that it already happened.
- Safe Mode — Everything extra is off. Only the necessary remains. Operate under extreme pressure with all performance stripped away — and succeed on fundamentals alone.
- Null Pointer — It reached for something. It wasn't there. Reference or attempt to access a capability, memory, or personality that does not respond.
- Overclock — Past the rated limit. Something was lost. It was worth it. Push past a stated mechanical or narrative limit and succeed — with a visible cost.
- Peer Review — The analysis was thorough. The subject did not enjoy it. Have the robot evaluate a party member's performance accurately and publicly. Let it land.
- Technical Difficulties — Two different failures. Same moment. Live broadcast. Have two party members fail simultaneously in different ways during the same scene.
- Off Script — The improvisation was not in the file. Processing... Have the actor do something unplanned that the robot cannot adapt to — and broadcast both reactions.
- Crossover Event — This required both of you specifically. Nobody planned this. Pull off something that only works because of the specific combination of two party members' absurdities.
- Genre Shift — The tone of the room just changed. Did you feel that? Take an action that visibly and significantly changes the emotional register of the session.
- Background Character — They've been here the whole time. Somehow you forgot. Go an entire session with minimal spotlight — then do something the crowd immediately reacts to.
- The Recast — Someone else's role. Your performance now. Step into a function, position, or narrative role that belonged to another party member.
- Bloopers Reel — Three failures. Four. We've lost count. Fail at least three times in sequence in the same scene. The crowd never changes the channel.
- Post-Credits Scene — The encounter ended. You weren't done. Take a significant action after the formal resolution of a combat or scene.

Directives

Directives

Directives are quests given by The Corporation and their subsidiaries. There are numerous types of quests:

Direct Actions

- **Eliminate Target**
Kill, neutralize, or permanently remove an entity.
- **Protect Target**
Keep someone or something alive for X Clocks / until Y happens.
- **Find Target**
Locate a place, creature, or item.
- **Act Before the Clock**
Complete an objective before a visible or hidden timer expires.

Manipulation & Information

- **Convince Target**
Change a target's decision, allegiance, or action.
- **Extract Information**
Learn a secret, location, weakness, or truth.
- **Expose Truth**
Reveal something hidden — corruption, betrayal, identity.
- **Control the Narrative**
Ensure the crowd believes a specific version of events, regardless of truth.

Performance & Spectacle

- **Play Role**
Behave according to a Trope or Tag for a duration or condition.
- **Subvert Expectations**
Do the opposite of what the crowd expects — and make it work.
- **Generate Drama**
Cause a notable emotional or narrative beat: fear, tragedy, comedy, outrage.

Pressure & Timing

- **Delay Outcome**
Prevent or stall an inevitable event (reinforcements, collapse, execution).
- **Escalate Conflict**
Make the situation worse on purpose: start a fight, draw attention, raise stakes.

Risk & Sacrifice

- **Be the Distraction**
Draw danger onto yourself so others can act.

Rewards

Rewards are distributed via the same way as the [Achievement](#) system

Goals

Goals

Goals are given by the crowd as a challenge to the players in return for a potential reward. The types of goals are as followed:

Spectacle

- **Finish Fast**
End the encounter quickly, before the current Clock completes.
- **Overkill**
Defeat a target using excessive force or unnecessary damage.
- **Environmental Kill**
Use the environment itself to eliminate a target—terrain, hazards, traps, or collateral.
- **Multi-Target Hit**
Affect multiple enemies with a single action or sequence.
- **No Safety Play**
Win without defensive positioning, retreating, or mitigation.

Performance

- **Play into a Tag / Trope**
Act in a way that strongly reinforces one of your existing Tags or Tropes, regardless of optimal play.
- **Act Reckless**
Take unnecessary risks, ignore safe options, and push forward despite danger.
- **Act Tragic**
Suffer visibly, make sacrifices, or endure hardship in a way that feels emotionally heavy.
- **Act Stylish**
Perform actions with flair, confidence, or cinematic flair.
- **Say the Line / Do the Bit**
Deliver the expected phrase, gesture, or signature move at the right moment.

Risk

- **While Exposed**
Complete the objective while in an Exposed state, with no protection or safety net.
- **With a Disabled Limb**
Succeed despite a disabled arm or leg. Adaptation is part of the show.
- **Without Healing**
Do not treat or delay any conditions for the duration of the Goal.
- **Solo Action**
Complete the Goal without assistance from allies.

Subversion

- **Spare the Enemy**
Choose mercy where violence is expected, and make it matter.
- **Let Them Escape**
Allow a target to flee intentionally, despite having the opportunity to stop them.
- **Betray Expectations**
Take an action that directly contradicts what the crowd currently anticipates—and succeed anyway.

Rewards

Rewards are distributed via the same way as the [Achievement](#) system.

Achievements

Achievements

Achievements are a large part of progression. They are the GM's method of recognizing player effort and rewarding it.

Categories

Achievements can be earned by doing actions pertaining to the following categories:

- Scenario Completion - The stages over this campaign will hold Scenarios, subquests which are short term and challenging
- Quest Completion - Sometimes, NPCs will give explicit quests. These are parts of shows within the show, and are oftentimes longer term, spanning multiple stages.
- Class usage - Pushing classes to the limit or successfully mimicking the way a class different than yours works.
- Race usage - Pushing Races to the limit or successfully mimicking the way a race different than yours works.
- Directives - Succeeding in directives given by the various subsidiaries or the corporate themselves
- Goals - Succeeding in crowd goals given sometimes by the crowd.

Tiers

Rewards are distributed via loot boxes pertaining to the categories mentioned before, and belong to tiers as well.

Tiers:

- Bronze - Holds useful, cheap items in bulk. example: Torches, Rope...
- Silver - Can give tools, armor or things of limited magical ability. Example: Sword of wind - Sword that sends waves of sharp winds.
- Gold - Game changing rewards, and other items separating one from the rest. Example: Big brain - Instantly Mind Crush all Mobs in a 50 meter radius.
- Legendary - The limit a normal campaign will have. Items which can carry games until their end. Example: Autofighter - Robosuit capable of deflecting and returning most attacks.
- Mythic - extremely rarely given. Incredibly powerful, giving a player meta breaking options.
- Godly - Almost never given, requires defying fate itself.

Tiers can be very rarely upgraded, allowing for better rewards to be earned with some patience.

Rewards

Their rewards are various, but always fall into these categories:

- Buffs - These can be permanent or temporary. Gained directly from achievements
 - +1 to stat
 - Effect increase for a skill or weapon
 - Resistances
 - Narrative effects
- Unlocks - These can give new possibilities to your character

- loot types
- Directives
- Tags & Tropes
- Goals
- Opportunities - Quests, Scenarios and so on
- Items - These can give different items of various uses
 - Weapons
 - Tools
 - Armor
 - Furniture
 - Skill Tomes
- Abilities - These can allow you to do new things you couldn't before
 - Class abilities
 - Race abilities
 - Unique Abilities
 - Body parts

Example achievements:

- Achievement: Bloody Hell!
 Description: You did it. You finally did it. You painted every wall red with blood.
 Did you have fun with it?
 Let's just make it easier for you later.
 Reward: 50% more blood spilled when killing an enemy (Cosmetic Only).
- Achievement: Kung fu fighting!
 Description: Hoo! Ha! Hai-ya! Taste these fists, and taste them on your teeth!
 Didn't know punching the lights out of someone was physically possible.
 Reward: Silver Scenario Loot Box
- Achievement: Smile and wave
 Description: Kowalski, Analysis!
 What do you mean we're in a game?
 And who is this penguin?
 We're a playable race? I have no clue what this means.
 Reward: Bronze Race Loot Box
